

PILOT PROJECT

PARTNERSHIP OPPORTUNITY

Purpose

To test the efficacy of an Infoflip™ training manual for Heavy Equipment Spotters. Designed to make highly complex and detailed information easily accessible, Infoflip™ is a unique weatherproof format, useful in any application where quick reference is important.

Objectives

Moving equipment is a potential source of serious harm and can cause costly damage. A **spotter** is a person designated to assist the operator in the safe movement of their equipment to make sure the heavy equipment doesn't inadvertently damage people, property, equipment or vehicles.

The Heavy Equipment Spotter Training Infoflip™ has been developed to promote improved communication between the operator and the spotter through standard signals and rules of conduct, in a unique weatherproof format.

Potential Results

The Heavy Equipment Spotter Training Infoflip™ will create an environment of co-operation with clear, consistent communication between operators and spotters so as to minimize the potential for harm or damage.

Types of incidents that can be prevented using spotters include:

- Injury or death to workers entering an operator's blind spot or line of fire.
- Electrocutions or explosions due to contact with overhead powerlines.
- Contact with other property or equipment/vehicles.

Process

The Infoflip™ manual is ready to print on demand.

If desired, the customer can provide a company or corporate logo to be placed on the front cover artwork.

Flip Productions will provide a PDF draft of the cover artwork for approval before proceeding to print.

Printing, production and shipping will take about 3 – 4 weeks.

Investment

\$1,500 = 50 copies
